

# Welcome to the IRM DInfo graph

---

This is the online version of the *Interlisp-D Reference Manual* (IRM). Each chapter, section and sub-section of the IRM is represented here as a node in a DInfo graph. DInfo provides the mechanism for browsing this graph.

Most interaction with DInfo is done through the FreeMenu at the top of DInfo's window. The following commands are useful for graph navigation:

**Top!** will always bring you back here, to the top node of the graph. Note that the name of the top node is printed next to the command button.

**Parent!** will bring you to the parent of the current node.

**Previous!** and **Next!** provide linear access to the graph. Successive mousings of **Next!** will take you from the front to the back of the *Interlisp-D Reference Manual*.

The **Display:** toggles control what information will be displayed and how.

**Graph** toggles display of the graph local to your current position. Mousing a node in the graph will cause you visit that node.

**Menu** toggles display of a menu of the children of the current node. Selecting an item from this menu will cause you to visit that subnode.

**Text** toggles display of the text of each node. Turning this off allows quick motion about the tree while searching for the appropriate documentation.

**History** toggles display of the history of where you have been in the graph. Selecting an item in the History menu will cause you to revisit that node.

**Lookup!** will prompt for and look up a term in the IRM's index. Wildcards are allowed.

**CrossRef!** is not used by the IRM DInfo graph.
