

# PRESS

---

Xerox Lisp includes utilities for generating hardcopy in "Press" format. This is a file format for communicating documents to Xerox laser xerographic printers of the Press, Spruce or Fullpress class, which are known by the names Dover, Penguin, Raven and Spruce.

Note: Press, along with other classes of printers, is described fully in two sections in the *IRM*, "Hardcopy Facilities" and "Fonts."

The reason for putting this document into the *Lisp Library Modules Manual* is that support of these printers is no longer an integral part of the system.

## Requirements

---

FONTS.WIDTHS

PUPPRINT.LCOM

A Press print server

## Installation

---

Load PRESS.LCOM from the library.

Set the variable PRESSFONTWIDTHFILES (see below).

## User Interface

---

You can use the usual means:

- HARDCOPY in background (right-button) menu
- HARDCOPY in FileBrowser menu
- Functions typed into the exec window (see below)

## Functions

---

DEFAULTPRINTINGHOST	[Variable]
PRESSFONTWIDTHFILES	[Variable]
SEND.FILE.TO.PRINTER	[Function]
LISTFILES	[Function]

(For details about all the above, see the *IRM*.)

## Limitations

---

PRESS does not support NS characters or NS fonts.
