Before you can print the Medley LispUsers' tedit files you must do the following:
1.	If you aren't running in Lispcore you need to load {eris}<tedit>tedithcpy.locm
2.	In IL:\ASCIITONS change entry 183 so that it reads 183 instead of what it normally reads.
Doing these two things causes the Envos logo to print correctly. To print some of the LispUsers' modules you must have some functions loaded. The following table shows what you must have loaded to print certain LispUsers' modules:

Module name	File needed to print or display correctly
equation examples	Mathtons.lcom equations.lcom and set il:|EQ.UseNSChars|to T
Doc-objects	docobjects.lcom (loads dateformat.lcom)
hpgl	sketch.lcom
