

DEMO -- utilities for running demos / tutorials in Medley

includes

  OPEN-URL (URL)  
    (rename of ShellBrowse)  
  MEDLEY-CONTRIB (REPO)  
    shows GitHub contributors to given repo  
    uses ShellBrowse  
  BKSYSOBJ(string)

DEMO-\*.TEDIT

  contains scripts / TEDIT file talks  
  add your own

BKSYSOBJ is the start of a facility

(TEDIT.INSERT.OBJ (BKSYSOBJ "(CONS NIL)"       (TEXTSTREAM(WHICHW))]

You should see (CONS NIL) in the TEDIT stream, clicking should shove (CONS NIL into an Interlisp exec, waiting for ) or ]. (probably the image objectg should be shaded, may also have to set the RDTBL flag on BKSYSBUF for strings, but this is a start).
