GREP

By: Larry Masinter (Masinter.pa@Xerox.com)

INTRODUCTION

Like FGREP of Unix: searches for strings in files.

(GREP *STRS FILES OUTSTREAM*)   [Function]

STRS is a string or a list of strings. *FILES* is a file or a list of files (including * wild-cards). Searches for the given string(s) in the given file(s), showing each line on *OUTSTREAM*. The function The function TGREPcreates a scrollable Tedit stream to show the output.

(TGREP *STRS FILES OUTSTREAM*)   [Function]

(PHONE *name*)   [Function]

Calls (GREP name PHONELISTFILES). PHONELISTFILES is initialized to NIL. (The PARC init file resets it to point to the PARC phone list.)

For example,

```
(GREP (QUOTE ED) (QUOTE {INDIGO}<REGISTRAR>PARCPHONELIST.TXT))
```

will print:

```
(from {INDIGO}<REGISTRAR>PARCPHONELIST.TXT;3)
4183  <Endicott>, Fred  35-1354
4435  <Fiala>, Ed 35-2166
4598  <RKennedy>, Ray   34-78
4839  <McCreight>, Ed   35-2146
5759  Pedersen, Jan     32-202
4818  Satterthwaite, Ed *    35-2174
MES   Solcz, Edward J.  8* 348-1214
ATA   Wahlenmeier, Fred 887-4018
```
