HARDCOPY-RETAIN

By: Herb Jellinek (Jellinek.pa@Xerox.com)

Introduction

This module adds a "To a file and a printer" option to the Hardcopy item on the system window and background menus. This option sends the contents of a window or screen region to a printer, and simultaneously creates a file containing a printer-ready copy of it (e.g., an Interpress master); this makes it easy to run off multiple copies later.

Using it

When loaded, HARDCOPY-RETAIN calls the function xcl-user::install-option to side effect il:|WindowMenuItems| and il:|BackgroundMenuItems| and to set il:|WindowMenu| and il:|BackgroundMenu| to nil, thus forcing them to be recalculated.
