
TABLE OF CONTENTS

1. INTRODUCTION TO RULE-ORIENTED PROGRAMMING IN LOOPS	15
1.1 Introduction	15
1.2 Basic Concepts	16
1.3 Organizing a Rule-Oriented Program	17
1.4 Control Structures for Selecting Rules	18
1.5 One-Shot Rules	22
1.6 First-Last Rules	23
1.7 Saving an Audit Trail of Rule Invocation	23
1.7.1 Motivations and Applications	23
1.7.2 Overview of Audit Trail Implementation	24
1.7.3 An Example of Using Audit Trails	24
1.8 Comparison with Other Rule Languages	26
1.8.1 The Rationale for Factoring Meta-Level Syntax	26
1.8.2 The Rationale for RuleSet Hierarchy	27
1.8.3 The Rationale for RuleSet Control Structures	28
1.8.4 The Rationale for an Integrated Programming Environment	29
2. THE RULE LANGUAGE	31
2.1 Language Introduction	31
2.2 Kinds of Variables	32
2.3 Rule Forms	34
2.4 Infix Operators and Brackets	35

2.5 Interlisp Functions and Message Sending	37
2.6 Variables and Properties	38
2.7 Computing Selectors and Variable Names	39
2.8 Recursive Compound Literals	40
2.9 Assignment Statements	41
2.10 Meta-Assignment Statements	41
2.11 Push and Pop Statements	42
2.12 Invoking RuleSets	42
2.13 Transfer Calls	43
2.14 Stop Statements	43
3. USING RULES IN LOOPS	45
3.1 Creating RuleSets	45
3.2 Editing RuleSets	45
3.3 Copying RuleSets	46
3.4 Saving RuleSets on Lisp Files	47
3.5 Printing RuleSets	47
3.6 Running RuleSets from LOOPS	47
3.7 Installing RuleSets as Methods	48
3.8 Installing RuleSets in ActiveValues	49
3.9 Tracing and Breaking RuleSets	50
3.10 The Rule Exec	51
3.11 Auditing RuleSets	52
3.12 Loading Rules	52
3.13 Known Problems	52
