Notice of release of Notecards 1.2i

The 1.2i Intermezzo release of Notecards is hereby officially released.

To run NoteCards, load onto an Intermezzo sysout the file {qv}<notecards>release1.2i>notecards.dcom. As usual, send bug reports by choosing "NoteCards Report" from the Lafite middle button send mail menu. Mail of more general interest to the NoteCards community should be sent to NoteCards↑.pa.

Even if you have been using 1.2i for some time and feel comfortable with Notecards, please take a look at the release notes in {qv}<notecards>release1.2i>doc>ReleaseNotes.ted.

The release notes describe in detail the changes since 1.1. These include incorporation of the latest version of sketch, new functionality in the browser, a new notefile inspect and repair facility, several new library packages, and many other feature additions and bug fixes.

Also on {qv}<notecards>release1.2i>doc> you can find updated documentation on the programmer's interface, ProgIntFace.ted, and a new document describing the inspect and repair facility, NoteFileInspector.ted.

The library packages and accompanying documentation can be found in {qv}<notecards>release1.2i>library>.

Enjoy!
