        ;; This ensures that files in the xlisp.sysout are as up-to-date as possible with respect to sources. Reload (compiled, if possible) files that ;; correspond to symbolic files whose filedates are later than the filedate in the system. If you want a new compilation of a file that has not been ;; modified to be included, then you must make a trivial update of the symbolic file and recompile it, to give it a new, later date. This is because it is
          unsafe as a general default to load compiled files with dates later than the sysout, and the sysout doesn't record the dates of loaded compiled
        ;; files, just their symbolic versions.
        ;; Should be run while connected to MEDLEYDIR
        (LET ((SKIPFILES '(SYNCLISPFILES))
                     (SOURCEDIR (MEDLEYDIR "sources")))
                  ;; FASLOAD has to come first, unconditionally, to get the DFASL file dates converted properly.
