# TEdit Hand-test Auxiliary Files

**This is an alphabetical list of the files on the directory {Eris}<Test>Library>TEdit>Hand-Aux>.**

### Abbrev-Sample.TEdit

A listing of all the abbreviations TEdit supports, along with what they should expand to.  To test, try expanding all the abbreviations, and make sure they match the specified expansions.

### AR10063.TEdit

If you TEDIT this file and hardcopy it, you should get several pages of text with even margins.  If the bug it tests for is still present, some of the paragraphs will be raggedly justified on the right, and some lines of text in the left-hand column on a page will overlap the right-hand column.  To print this file, you will need to load DANCEROBJ.LCOM first, as it defines the image objects used in the document.  You will also need to add {ERIS}<TEST>Library>TEdit>Hand-Aux> to both DISPLAYFONTDIRECTORIES and INTERPRESSFONTDIRECTORIES, since the font files for the "Dancer" font reside here as well.

Other files that are part of this test:

### Dancer10-c0.Displayfont

The dancer diagram font in 10pt for the display

### Dancer12-c0.Displayfont

The dancer diagram font in 12pt for the display

### Dancer10-c0.WD

The dancer diagram font in 10pt for the printer

### Dancer12-c0.WD

The dancer diagram font in 12pt for the printer

### Dancerobj.LCOM

Defines dancer diagram image objects.

### Dancer10-c0.Displayfont

See AR10063.TEdit

### Dancer12-c0.Displayfont

See AR10063.TEdit

### Dancer10-c0.WD

See AR10063.TEdit

### Dancer12-c0.WD

See AR10063.TEdit

### Dancerobj.LCOM

See AR10063.TEdit

### KANJI-DEBUG.MAIL
### KANJI-DEBUG.MAIL-LAFITE-TOC
### KANJI-DEBUG2.MAIL

Contain Lafite messages that have Kanji in them.  You ought to be able to read the messages without TEdit either going into an infinite loop, or printing the whole message unintelligably, or giving you an error.

### Underline-Test.TEdit

All the underlines that you see on the screen ought to print properly. Furthermore, the text underlined, or just before and after the underlined text, should NOT come out all scrunched up or non-existant. Both these have happened at times in the past.

### {ERIS}<TEST>Library>TEdit>Hand-Aux>BIG-FOOTNOTE.TEDIT

This file contains a number of large footnotes--large enough that some footnotes are carried over to subsequent pages. When this happens, there was a bug such that the footnote got duplicated. If you print this file, that shouldn't happen. HOWEVER, you WILL have to create the CLOS package for it if you don't have a CLOS package already, since some of the symbols in the graphs in the document are in that package.

### {ERIS}<TEST>Library>TEdit>Hand-Aux>HEADING-KEEP-EXTRA-LINE-GRAB.TEDIT

There was a bug, AR>><<, such that a line moved to the next page because of its heading keep property took the prior line with it. At the page 6/7 boundary on the hardcopy of this document (interpress), the line [Liebowitz83] should NOT be preceded by a duplicate of the last line from the prior page.
